

MedHackathon participation and contest

For MedHackathon there are two possibilities of participation:

- In situ, where people will sit together and cooperate in team work during hackathon
- Remotely, where people will cooperate from their homes and will contribute remotely. To help those teams we will prepare already before conference blog, where people will be able to share their ideas and also through teleconferencing tools they will form new teams. We will also offer REDMINE tools for synchronization of work and we expect, that teams to share their code trough GitHub or other similar tools

We believe, that, remote participation will give provide better possibilities for someone to join teams or bring ideas that will assist the participation of other from developing countries. We are primary focused on Mediterranean region, but people from other regions are not excluded.

MedHackathon contest

We see as main motivation for participation on Hackathon and a good chance for networking. That is our primary goal. End users would find solution for their needs to promote their ideas; Developers would learn about new data, new tool and new business opportunities. It would be also possible for them to find new talents for their company as well as to establish new business cooperation. Business oriented people will find new excellent ideas for their business or investments. At the end, it will be chance to spent three exiting days with excellent friends and in excellent environment.

Nevertheless, we plan also to organize competition during Hackathon

During MedHack we expect two groups of team:

- Professionals composed from current employers of existing companies, users, designers, business oriented persons and others (students are not excluded) – for them we see as motivation to find new possibilities of business, new ideas, and new data new cooperation and also recognize new talents.
- Students teams composed only from students, starting from high schools, trough bacillary, masters and PhD. Focus of our content will be on this teams. So we see this event as good possibilities for them to start new business or sell themselves. And our contest will help them.

There will be group of mentors starting from technical experts, data experts but also business angels. We plan to offer incubation for best student team in Patras incubator.

Evaluation criteria for content about best student application of MedHack

Every application will be evaluated by four criteria's by experts. Every criterion will be evaluated by every experts and it will be rank between 0 – 10 (10 is the best results). The final score will be sum of all experts in all criteria.

1. Technology reediness will evaluate status of solution, how far is from market. As example could be used next methodology https://en.wikipedia.org/wiki/Technology_readiness_level
